Enhancing Your Restorative Dentistry: Profitability and Predictability for the Next Decade (2 CE credits)

Join us for an in-depth and highly practical program designed to equip you with the skills and strategies necessary to make your restorative dentistry more profitable and predictable in the coming decade. In this comprehensive session, you'll learn how to prepare your practice for the future by adopting innovative techniques and materials that not only enhance patient outcomes but also streamline your workflow and increase your practice's profitability. You will take away practical insights that you can implement immediately in your practice.

- Preparing for the Future: Understand how to strategically position your practice to thrive in the evolving dental landscape, focusing on profitability and efficiency.
- Predictable Restorative Techniques: Master the use of bioactive restorative materials, for composite restorations, as well as advanced crown cementation techniques.

Speaker: Tanya Dunlap, PhD

Optimal Gingival Health and Restorative Outcomes with Perio Protecty (2 CE credits)

Reducing chronic infectious burdens on the immune system has always been important in healthcare, and dentistry is no different. Oral infections like those associated with gum disease place a chronic low-grade burden on the immune system, and treatment for it has been associated not only with health gums, but also with improvements in systemic health outcomes and optimal restorative results.

Attend this course to review the science and the practice of Rx Tray homecare. We'll set goals for your own practice and workshop case presentation.

- Identify the benefits and limitations of antimicrobials with oxidative and oxygenating reactions for biofilm management.
- Recognize patient candidates who can benefit from Rx Tray therapy and the appropriate tray treatment protocol.
- Understand how a simple number can be an effective basis for improving health outcomes.
