

Patient Protocol

Tooth sensitivity can make simple pleasures painful. ReminGel™ is intended to provide fast relief from sensitivity and reduce the appearance of white spot lesions. ReminGel can help remineralize enamel, as it contains the natural building blocks needed to maintain and repair the damaged tooth.

Gentle on teeth and gums, ReminGel is safe for everyday use at home and clinically effective via provider prescription. It helps restore tooth structure and strengthen enamel—comfortably and confidently.

Instructions for Using ReminGel™

STEP 1: Use ReminGel™

- Cut the tube tip close to the narrow end. (a)
- Express a ribbon of ReminGel™ in your clean PerioProtect® trays. (b)
- Insert your PerioProtect® trays containing ReminGel™ into the mouth in a typical fashion such that the ReminGel™ contacts the teeth. (c)
- Expectorate any excess ReminGel™.
- Leave ReminGel™ in contact with the teeth for 15 minutes.

Recommended contact duration: 15 minutes, unless otherwise directed by your dentist or doctor.

STEP 2: Clean the Trays

- After using ReminGel™, remove trays and rinse thoroughly with cool water. (d)
- Brush trays gently with a soft toothbrush to remove any residual gel.
- A toothbrush may also be helpful in removing any residual ReminGel™ from the tooth surface.
- Gently towel-dry your trays and return them to the storage case.
- Continued use as directed by a dentist or doctor.

Do not mix with other PerioGel® products. Always use products separately as directed by your dentist.
