

## Gingivitis (Gum Disease)

***Gingivitis is an early stage of gum disease with symptoms that include bleeding gums, persistent bad breath, and swollen, red or tender gums. At the root of the disease is an infection that causes inflammation. Early treatment can prevent this infection from spreading, reverse it, and prevent its reoccurrence.***

***Chronic, low grade infection in the mouth has been linked to arterial inflammation, type 2 diabetes, heart attack, stroke, pregnancy complications, dementia, and certain types of cancers. Like any disease, early intervention is best. Your Doctor and Hygienist have recommended this therapy program to treat your condition.***

Your treatment will consist of the following:

### **THERAPY SESSION 1**

**Date:\_\_\_\_\_Time:\_\_\_\_\_**

Periodontal evaluation

Therapeutic scaling with ultrasonic and laser technology to debride infected areas

Irrigation w/ antimicrobial medicine

Impressions for Perio Protect System

### **THERAPY SESSION 2** (3 weeks after Session 1: 30 min) **Date:\_\_\_\_\_Time:\_\_\_\_\_**

Oral hygiene and home therapy instruction

Perio Tray™ delivery with medicaments, usage instructions and practice

### **THERAPY SESSION 3** (30 days after session 2: 1 Hr.) **Date:\_\_\_\_\_Time:\_\_\_\_\_**

Re-evaluation/ bleeding check

If bleeding –bacterial testing – and re-treat with laser and ultrasonic irrigation w/ antimicrobial medicine

Review oral hygiene and home therapy

Fine scale and FM polish (prophy)

*Total Program Investment: \$XXX.00  
Bacterial testing additional \$XXX.00 if needed*

I,\_\_\_\_\_ understand that I have gingivitis and accept the above outlined treatment.

I,\_\_\_\_\_ understand that I have gingivitis, for which a routine cleaning will not benefit my health, but decline the treatment advised for now.
